

MIROS DELIVERS OCEAN INSIGHTS AS A CLOUD-INTEGRATED SERVICE

Miros' sensors for measuring the ocean surface are now cloud-integrated. The new solutions are lightweight and flexible in that they are easy to install and maintain. The cloud-integrated functionality is based on Microsoft technologies and allows for easy and secure access to real-time sea-state data, anywhere, anytime, from any device and with minimum effort.

The portfolio of remote cloud-integrated sensors is truly plug and play – only power

How does this work?

Miros Cloud is a service offering which is currently built on top of our two key sensors:

- The Miros Wave and Current radar (SM-050)
- The Miros non-directional wave monitoring and water level radar (SM-140)

Miros Cloud simplifies data collection and remote access to data and enables various other services such as:

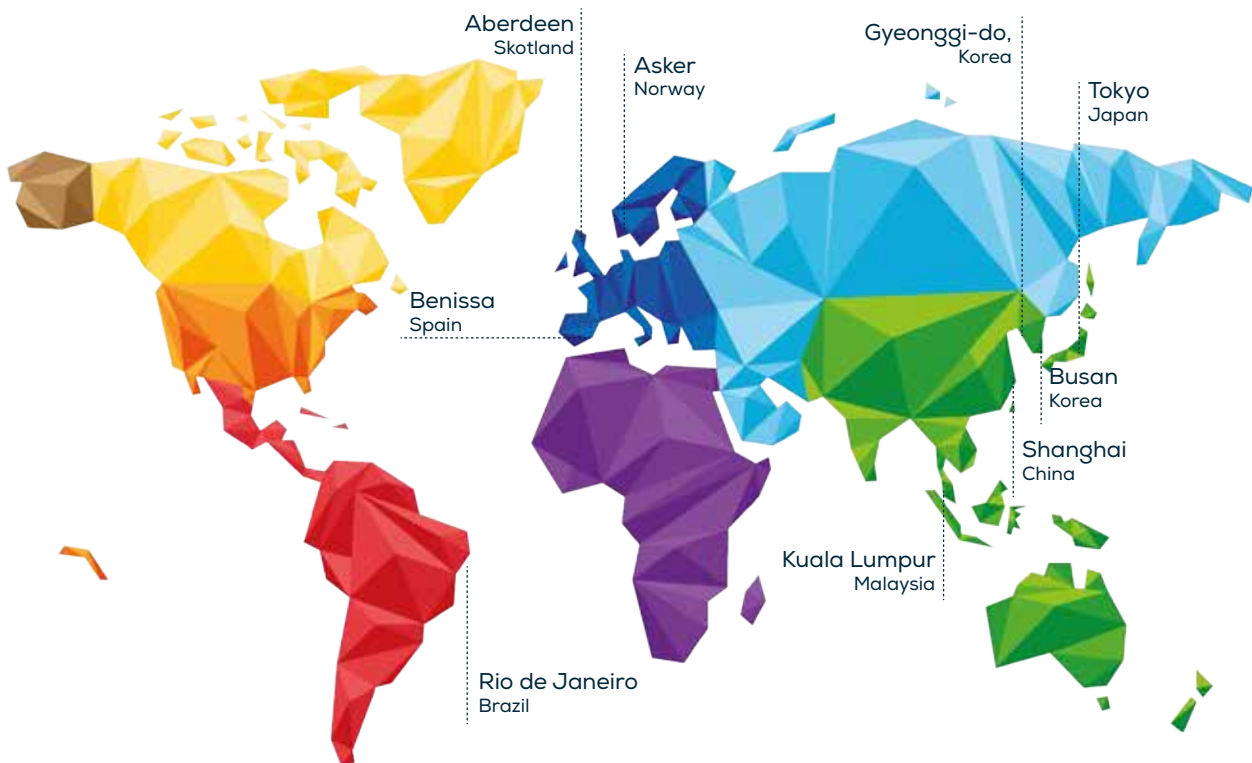

- real-time dashboards
- data streaming and download capabilities
- the option of integrating other types of data like weather forecasts, tide charts, AIS, etc.

and an internet connection are required. With online diagnostics and upgrades, embedded processing and a browser-based user interface the sensors are extremely low maintenance and cost efficient. None of Miros's wave monitoring products are installed on buoys or submerged in seawater, allowing for highly cost-effective installation and maintenance. Now you have this kind of convenience at your fingertips.

Miros Cloud introduces the following benefits:

- Accurate, reliable data accessible from anywhere via the internet
- Cloud-integration allows for enhanced scalability and user access on- or off-shore
- Ocean state data can be hosted centrally, in the cloud
- Data streaming & download capabilities
- Low maintenance costs. Cost-effective, remote upgrades and online diagnostics
- Low upfront costs due to the as-a-service pricing
- Quick setup and deployment, the cloud offering is truly plug and play

Miros' cloud-based technology for wave and current monitoring during offshore operations gives you decision-making solutions which provide everyone involved with access to real-time data, anytime, anywhere.

SERVICE AND SUPPORT

Miros has experienced personnel supporting and servicing Miros technologies and installations worldwide. Miros supports customers both on long-term service contracts and with ad hoc services as needed.
